

MANAGEMENT OF THE LIFECYCLE OF THE DIGITAL CERTIFICATES

Gartner Visionary 2018

Automatic and centralized management

The senhasegura's Certificate Management manages all the lifecycle of the certificate inside the organization. Since its discovery through the automatic scan in websites, directories and web servers, to the automatized renew of the certificate through external or internal CAs

BENEFITS

CERTIFICATES MANAGEMENT

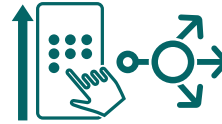

A complete and centralized view of all the certificates and its respective status.

REDUCTION AND UNAVAILABILITY

Reduce the unavailability by expiration of certificates or due to human errors in the publication.

OPERATIONAL EFFICIENCY

Automation in the management of the lifecycle of the certificate, as well as validations through complete APIs.

INCREASE IN SECURITY

Applications with safe certificates, respecting the pre-requirements and security policies of the organization.

FUNCTIONS

DISCOVERY OF CERTIFICATES

Record 100% of the remote sessions performed in senhasegura in compact videos in excellent quality, including simultaneous sessions.

RENEW AND PUBLICATION

Automatically configure the periodic renew and publication of the certificates, avoiding the loss of expirations.

GENERATION OF THE REQUISITIONS

Perform the requisitions using the pre-registered information and reducing the errors in the creation of the certificates.

SIGNATURE OF THE CERTIFICATE

Use the integration with the main CAs of the market to automatically sign the certificates inside the solution, including the selfsigned.

RENEW AND PUBLICATION

Keep total control over tree expirations of the certificates under management. Send alerts in configurable periods to specific teams.

VULNERABILITIES IDENTIFICATION

Grafically visualize the status of all the certificates, identifying which, for example, use cryptographies out of the security policies of the organization.
