We adapt to the present's changing reality day by day, making it possible to merge new technologies with older ones in an ongoing process

**24/7**

Technical support with a dedicated 24/7 option always there for you.

**Worldwide**

With presence in more than 50 countries around the world.

**5 minutes**

That is the time you need to install and discover your systems.

**+2.500**

Manage huge amounts of systems with our Metaconsole.

**96%**

of our clients renew each year their subscriptions and licenses.

**+100k**

users all over the world that use Pandora FMS in all kinds of organizations

**What is not measured does not exist.** Reduce IT expenses by up to 40%, optimizing your technological investment and adapting it to your business real needs. Dashboards and reports show the IT health of your organization in real time.

**Log collection:** Collect, see and centralize all your logs in a single point. Reach your goals while reducing monitoring costs by up to 40%.

**Inventory:** Collect and monitor the status of all your IT infrastructure data in a single tool.

**Remote control:** All your devices are controlled by a single tool accessible with just a web browser.

**Issue management:** Either through third-party integrations or Pandora FMS ITSM features.

## Monitoring

**Networks and Communications:** See all of your information together, even if you have thousands of devices to monitor.

**Servers:** Unify different sources in a single point: OS, apps, logs, storage, networks, UX, etc.

**Applications:** Monitor your business applications at every level and get the data you need from your applications.

**Cloud and virtualization:** Optimize your infrastructure whether in hybrid, virtual or cloud installations.

**IoT:** Monitor IoT of all tasks with IP. Simple, affordable and at full speed.

**SAP:** The only preconfigured unified monitoring solution certified by SAP™

**Mainframe:** Have a single platform to collect and display information, wherever it comes from.

## Business oriented

**For MSP:** A single console, multi-tenant, for hundreds of clients and thousands of devices connected simultaneously.

**Service-oriented monitoring:** Locate the key problem in your company's technology network that will cost you \$ 60,000 and not the \$ 30 problem

**Business monitoring:** Knowing in real time the vital signs that support your business is key to anticipating any possible problem

**User Experience:** Check whether your application works as expected. Detect and fix failures before your customers do.

**SLAs, KPIs:** With your customized reports, you will save money by making your service providers comply with the agreed conditions.

**Integrations and OEM:** Its compatibility allows getting information from any source to present it to clients and you may even incorporate Pandora FMS into your product or service.
