

# Consolidating Remediation to Reduce Risk

**Gonzalo Cruells**  
General Manager

**Vicarius's TOPIA provided Fastco with an automated process to remediate vulnerabilities, consolidating the patching process to one effortless tool.**

## The Challenge

With a large amount of vulnerability management products, Fastco was having a difficult time consolidating their remediation. They were flooded with multiple products for on premise devices, WFH devices, and cloud services. The added complexity made it difficult to be effective with their vulnerability remediation efforts. Furthermore, the disconnect between vulnerability assessment and prioritization with patch management prevented quick and easy execution. For Fastco, their clients' security always came first, and protecting it was their main priority. But they needed a solution that was easy to use and reduced their risk—that's where Vicarius came in.

*Vicarius's solution orchestrated our vulnerability assessment, prioritization, and patch management processes with ease.*

## The Solution

TOPIA's Real-Time Patch Management helped Fastco quickly deploy patches while consolidating efforts between IT and security teams.

Within 2 weeks, Fastco significantly reduced their risk level with TOPIA's vulnerability management and patch deployment tools. TOPIA has empowered Fastco to mitigate business risk across all devices and services, improving their vulnerability remediation.
