

Prioritize & Act Fast to Mitigate Risk

Yair Naveh
CISO

Vicarius' TOPIA allowed JCE to understand their risk across multiple subnets and sites and mitigate business risk with limited resources.

The Challenge

Each time a new threat was detected, the JCE team would scramble to mitigate the risk to servers and clients. Working in a reactionary loop made it very difficult for their team to do proper risk-reduction when they weren't able to predict what was coming. The team wasn't aware of until its CVE was released, remediation was 3X more intensive. For JCE, their business always came first and protecting it was their main priority. But they needed a solution that provide risk analysis, remediation tracking and quick deployment — that's where Vicarius came in.

"Vicarius's solution was able to identify risks across our organization faster and better than any other solution."

The Solution

TOPIA's risk-analysis engine helped JCE identify up to 32 high-risk applications that were vulnerable to exploitation. Within 2 weeks, JCE managed to reduce their risk level by 63% simply by patching and protecting with TOPIA's vulnerability management tools. TOPIA has changed how JCE approaches risk-reduction by empowering them to take a proactive approach to their risk-reduction efforts.
