

Takes the Stress out of Patch Tuesdays

Shai Shapira

IT Admin

Vicarius' TOPIA completely changed the way we track and mitigate CVE and patch-based threats, especially on Tuesday.

The Challenge

Patch Tuesday was always a pain for our team, we couldn't find a tool that would make our Patch Tuesday a wonderful day. We do our best to avoid unnecessary patching. We looked for a tool that could provide us with fast and proactive mitigation against today's rapidly-growing known and unknown threats.

"We used to have several services for patch deployment, but now we do it all under one roof"

Shai Shapira

The Solution

Now, even when we don't have an available patch, we use TOPIA's Patchless Protection tool to keep software protected in cases an update can not be done. TOPIA's real-time analysis takes up to 2 minutes tops, and has reduced our remediation timeframe in ways we never could have imagined. Thanks to TOPIA, we now complete the patching process within 12 hours when it used to take us much longer. Now our data is safe even if a patch is not available. If we had used TOPIA we could have understood much earlier on which patches to prioritize and which ones could wait to be deployed.
